YOU MAY SEE "UBUNTU" REFERRED TO AS "UBUNCHU". PLEASE ENJOY IT!

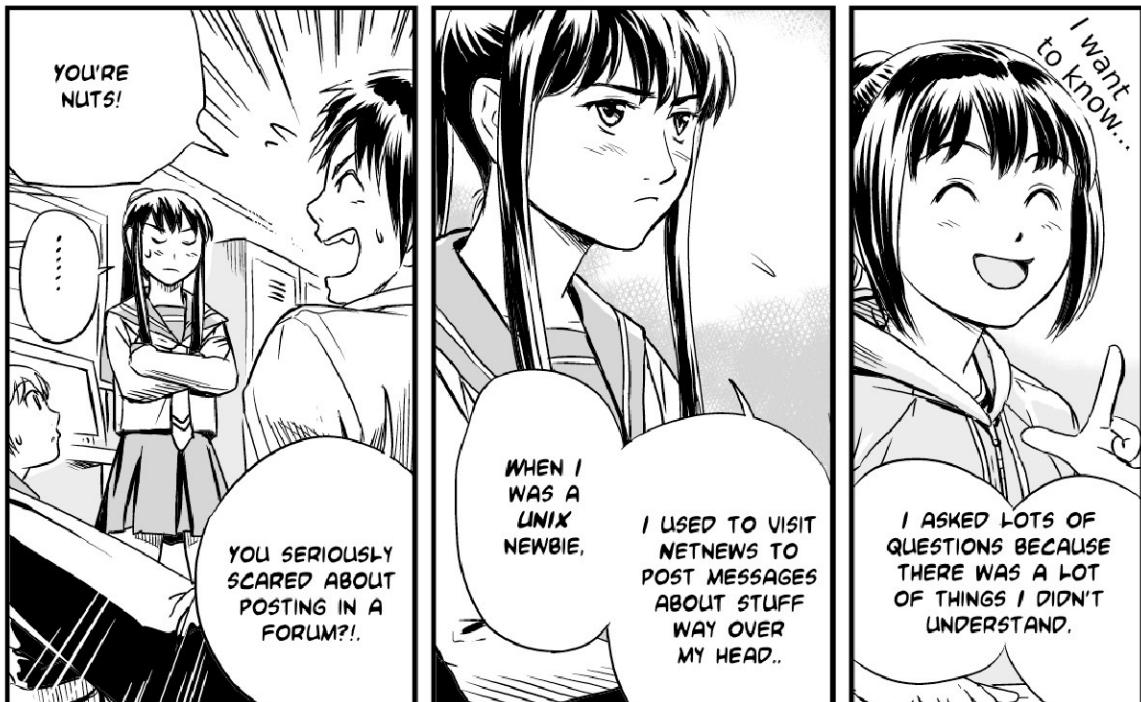

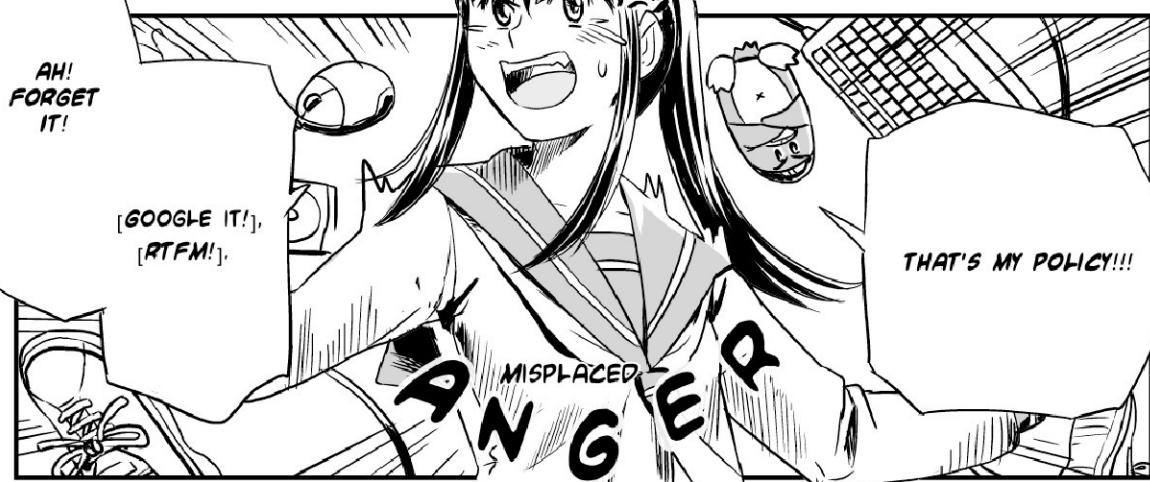

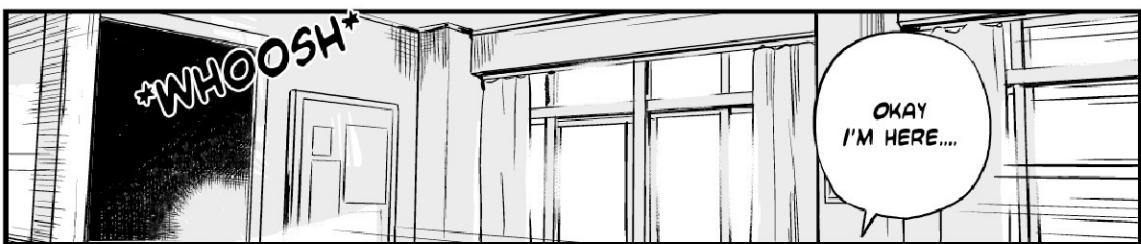

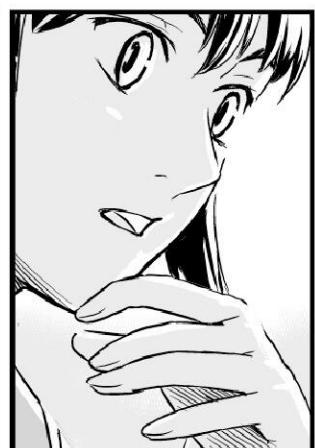

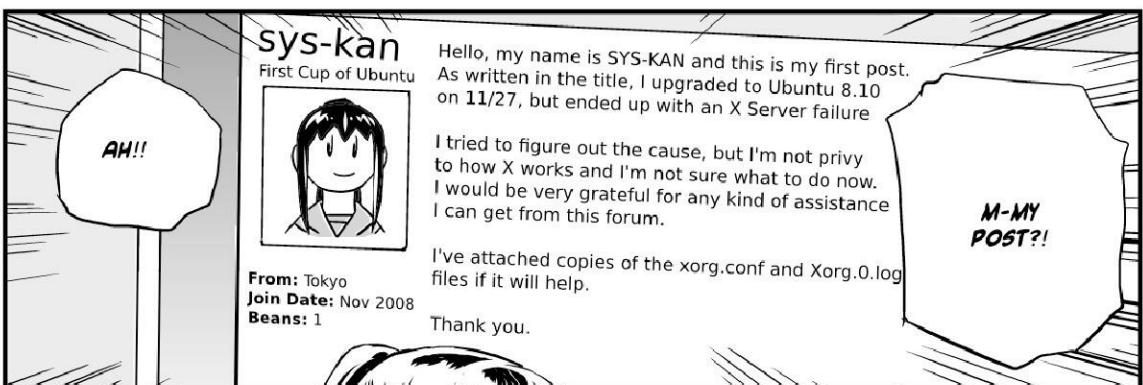

AN XORG BUG...?

I have the same problem in my system. Now that I know it's a bug, I guess we have to wait for a fix.

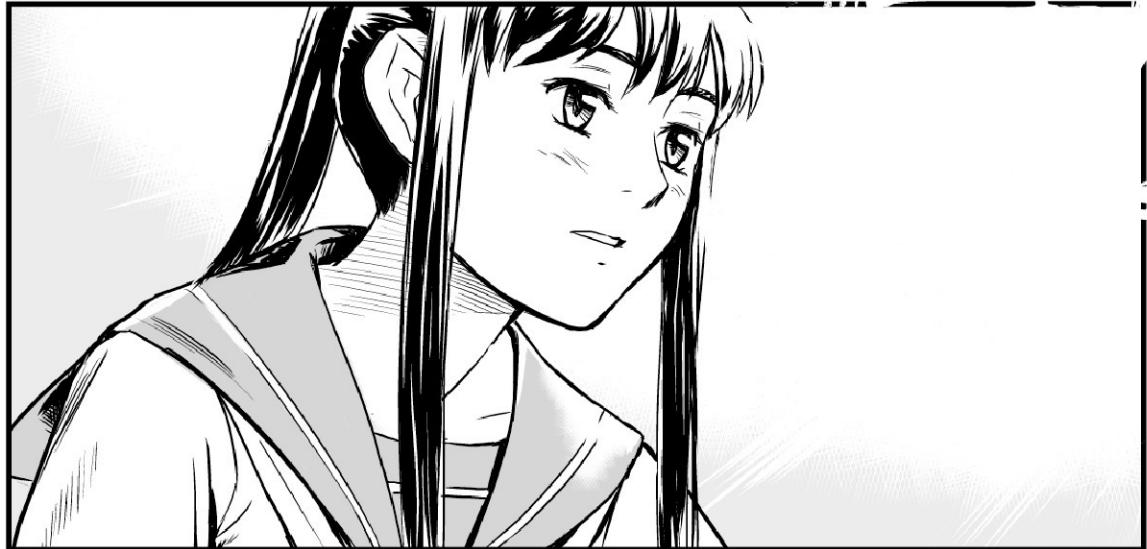

THAT'S WHY I DON'T UNDERSTAND...

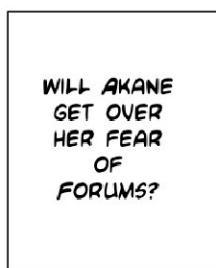

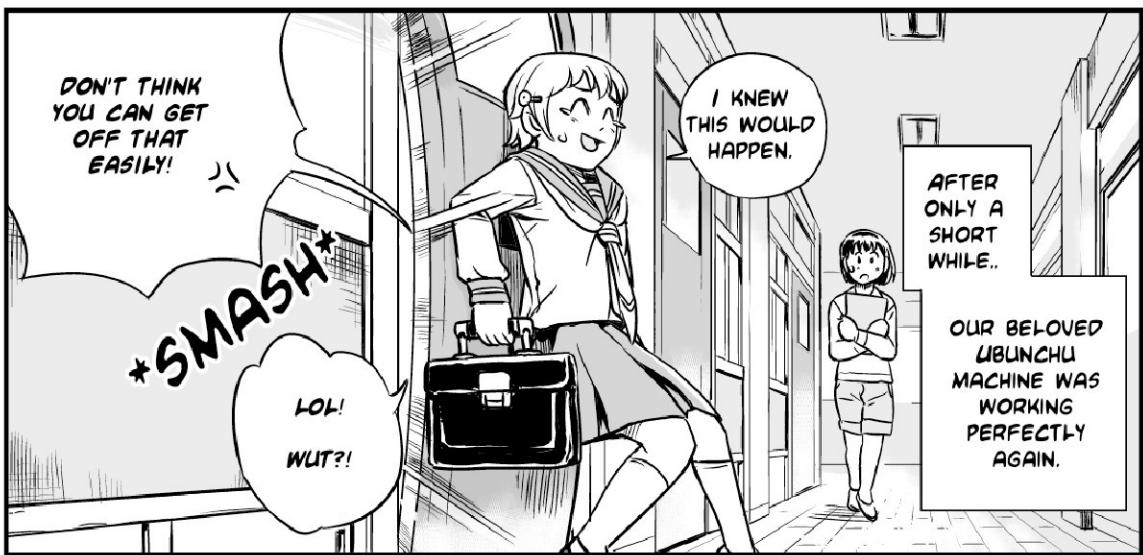

I can confirm this problem after an upgrade to Intrepid. The issue lies with the permission of xorg.conf file for X.org 7.4.

I reported this bug to Launchpad, so the problem should be fixed shortly.

I NEVER REALIZED SO MANY PEOPLE WOULD HAVE THE SAME PROBLEM.

My heartfelt thanks to SYS-KAN for the first detailed report!

THE  
END
